- Note:
- 1. C1 is used as filter capacitor with AC input (must be connected externally) and as EMC filter capacitor with DC input(must be connected). The recommended value of C1 is 10µF /400V(85Vac-264Vac), 10µF/450V(85Vac-305Vac);10µF /400V(100Vdc-370Vdc), 10uF/450V(100Vdc-430Vdc).
 - 2. We recommend using an electrolytic capacitor with high frequency and low ESR rating for C2 (refer to manufacture's datasheet). Choose a capacitor voltage rating with at least 20% margin, in other words not exceeding 80%. C3 is a ceramic capacitor used for filtering high-frequency noise. A suppressor diode (TVS) is recommended to protect the application in case of a converter failure and specification should be 1.2 times of the output voltage.
